

There is no good that can come out of this resolution. XM is a powerful tool and content is what makes it incredible. Having the ability to have quick any-point access to traffic and weather is extremely useful and valuable. It is not like this is a free service that is being taken out of other mediums (TV, regular radio, etc) since XM is a subscription service. I oppose, and believe the FCC should do as well, NAB's petition 04-160. We should allow XM to transmit this information, have the freedom to provide us, the listeners, with the content we deserve.

Best regards,
Juan
